

A Blueprint for Better Business

How Evo Car Share for business helps
organizations move on their terms

CREATED BY **BCAA**

Meet Ryder.

“ We have a lot of projects all over Vancouver, from Vancouver Island to Nanaimo to Chilliwack, *and Evo is always there to help us get around.* ”

Ryder Architecture* is all about connecting people to places.

They are a team of architects constantly travelling between their downtown office, client meetings and construction sites.

For this fast-growing firm, traditional options for getting around - such as employees expensing individual rides by taxi or ride-hailing apps - just weren't keeping pace.

Ryder needed a transportation solution that aligned with their values of efficiency, high performance and a sustainably built environment.

Enter **Evo Car Share for Business.**

Standard B2B: Corporately billed accounts offer your employees access to Evo's fleet of 2,500+ cars.

Private Fleets: Dedicated Evo cars parked at your office for the exclusive use of your employees.

Save time

Say goodbye to manual expenses with a simple consolidated monthly invoice

Save money

Our affordable rates include gas, insurance and unlimited KMs, plus free parking in the city

Save emissions

Help reduce your business' carbon footprint with our 100% hybrid and EV fleet[†]

Evo supplies, cleans and fuels all of its cars, so all drivers have to do is book an Evo, unlock it from their smartphone, and hit the road.

The familiar Evo user experience made it easy for Ryder employees to adopt this new change.

“I used to get expenses from employees using Evo to get to client sites,” says Ryder Principal Adam James. “So when Evo for Business came out, it allowed our team to use a single, streamlined platform.”

Now, employees can simply toggle between personal and business accounts when choosing an Evo, directly billing Ryder instead of having to manage expenses later. In short, the service has created a triple win, being better for the planet, user experience and the bottom line.

Driving Business Forward

Responsibility to society and the future of our planet is a key part of Ryder's philosophy.

The firm set out to deliver high performance architecture, through low carbon and low energy projects to help address climate change.

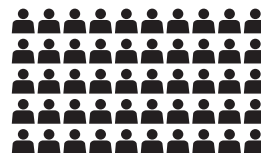

Ryder is focused on lowering their own footprint so having access to an all hybrid and electric fleet was a big draw for them.

A not-so-fun fact: Vancouverites emit 120kg of emissions yearly due to traffic congestion.**

So, Evo's fleet of 2,500 powerful and fuel-efficient hybrid and fully-electric vehicles was a big draw. Evo's fixed rates include everything from parking, gas, insurance and unlimited kilometres.

Reducing Costs to Make a Difference

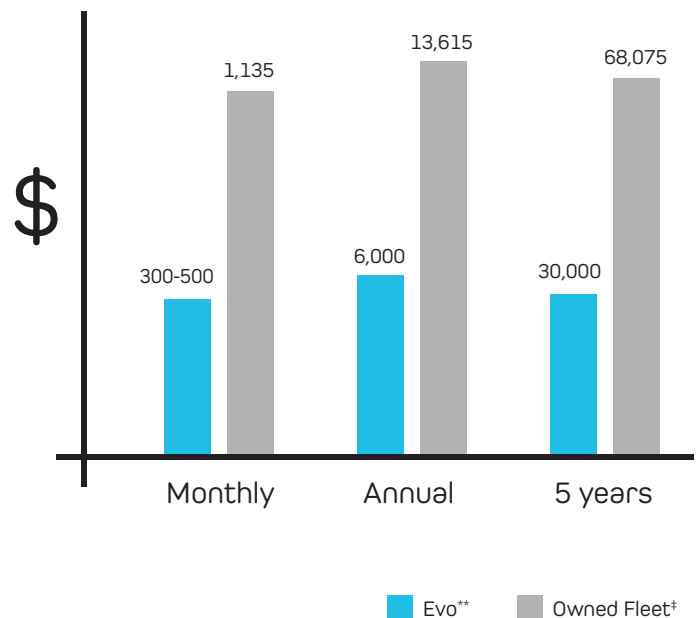

Businesses can also expect complete cost transparency, with an online management dashboard and a single, easy-to-understand invoice at the end of each month, with no surprises.

“ Against a car lease, insurance and parking, it seems to be *a much easier, cheaper and management free way of doing it.* ”

The streamlined operations of Evo for Business allows the Ryder team to work efficiently and autonomously without the administrative burden of frequent taxes and expense claims.

There is also no registration or annual fee attached to having a business account, which means organizations like Ryder only need to pay for what they use. Compared to company-owned vehicles that might be sitting unused for large parts of the day—but still require ongoing insurance and maintenance—car sharing with Evo is a much more cost-effective option.

How much can be saved

*Ryder Architecture (Canada) Inc. hold a Certificate of Practice from the Architectural Institute of British Columbia and maintains a corporate Evo account to facilitate travel between project sites. This description of Ryder's travel choice is provided for information only. It does not constitute a professional endorsement of Evo Care Share for Business or any other service.

**Based on Ryder Architecture using Evo Car Share for Business on demand.

†Considers a company that operates a fleet of five vehicles. These vehicles are used for a combination of business use and personal use, and the company covers all associated fleet costs, including fuel, maintenance, insurance premiums and depreciation. The annual costs per vehicle, including mileage reimbursement, are estimated at: Fuel costs: \$5,615; Maintenance: \$2,105; Insurance: \$1,684; Depreciation: \$4,211.

‡When compared to driving conventional ICE vehicles.
